PROCEEDINGS

Second International Symposium on Information Science and Engineering

—— ISISE 2009 ——

26–28 December 2009
Shanghai, China

Edited by
Wen Chen
Fei Yu
Bo Hu
Jian Shu

Co-Sponsored by
Shanghai Institute of Electronics, China
Shanghai Jiaotong University, China
Fudan University, China
Peoples’ Friendship University of Russia, Russia
National Chung Hsing University, Taiwan
Jiaxing University, China
Nanchang Hangkong University, China
Guangdong University of Business Studies, China

Los Alamitos, California
Washington • Tokyo
Second International Symposium on Information Science and Engineering

ISISE 2009

Table of Contents

Message from the ISISE 2009 General Chairs ................................................................. xv
ISISE 2009 Organizing Committee ..................................................................................... xvi
ISISE 2009 Committee Members ...................................................................................... xvii

Computer Applications

The Comprehensive Application Study of GRA and ISM in System Structure Analysis ................................................................. 3

Rui-Jun Guo, Bo-Liang Lin, Xin-Bo Ai, and Wan-Xiang Wang

RFID Network Planning Based on MCPSO Algorithm ...................................................... 8

Ben Niu, Edward C. Wong, Yujuan Chai, and Li Li

Research on Dynamic Determination Scheme for Subject’s Integrity Level of OpenID ........................................................................... 13

Junyin Wei, Mingxi Zhang, and Hui Liu

Design of an Application Cooperation Fair Congestion Control Mechanism ................................................. 18

He Hongying, Zeng Yunbing, and Chen Youjun

Comparison of Several Cloud Computing Platforms ........................................................................... 23

Junjie Peng, Xuejun Zhang, Zhou Lei, Bofeng Zhang, Wu Zhang, and Qing Li

Application on Seepage Monitoring by Multi-point Optical Fiber Grating

Temperature Measurement System ........................................................................... 28

Jun Tao, Lei Mu, and Ping Du

Noise Reduction Technology of Random Vibration Signal Based on Singular Entropy Theory ................................................................. 32

Zhang Jianwei and Li Huokun

A Three Dimensional Mesh Improvement Algorithm Based on Curvature Flow ................................................................. 36

Zhenhong Lv and Xin Chen
The Research of New Model of Agricultural E-commerce Based on Practical Teaching Requirement ..........................................................41
Lei Lei

Quality of College Teaching-Aided Website Service: Case Study ..........................................................45
Bai Yan, Li Jimei, and Xu Yan

Emergency Response Organization Ontology Model and its Application ..................................................50
Wenjun Wang, Xiankun Zhang, Cunxian Dong, Shan Gao, Lei Du, and Xingrong Lai

Database Systems

High-Speed Railway Fundamental Information Database System and its GIS ..............................................57
Xiaoning Zhai and Ziyu Liu

Reducing PAPR with Novel Precoding Method in OFDM System ..........................................................61
Xiaocui Lou

Study of a Layout Optimization Problem of Web Advertising ..........................................................65
Lihua Zhang and Lei Liu

The Knowledge Collaboration Effects of R&D Project Team ..........................................................70
Junpeng Li and Jun Wang

Application and Research of GIS in Tianshan Highway Geo-hazard Appraisal and Decision Sustain ....75
Bin Yang, Qing Wang, Zheng-wei He, De-zheng Gao, and Xiang-jun Pei

Risk Decision-Making for Purchasing Electricity in Multi-market on the Basis of Variance ................79
Xiao-jiang Huo and Zhong-jing Liu

An Empirical Research on the Development Strategy Efficiency of Small and Medium-Sized Commercial Bank Based on DEA ..........................................................83
Man-xin Chai, Lin Xu, Guang-hui Song, and Wen-wei Guo

Study on Reverse Logistics in Enterprises ..................................................................................87
Weidong Guo

The Effect of Knowledge Transfer Intention of Customer on Knowledge Transfer Behavior: A Social Exchange Perspective ..........................................................91
Tao Wang, Chuanxin Peng, and Nan Cui

Two Styles of Game Analysis between Environmental Protection Department and Manufacturer ..........95
Ziwen Han and Shanshan Jiang

Data Mining in Individuality Long-Distance Education System Applied Research ................................99
Lan Wang

The Design and Implementation of System Monitoring Component of Workload Adaptation Framework in Autonomic DBMSs ..........................................................104
Yan Qiang, Jun-jie Chen, and Xiao-gang Wang
Electronic Commerce

High Credible Model of E-commerce Website ...................................................................................................109
_Yu Song and Ling Wang_

A Reversed Stackelberg Approach to Electronic Commerce Logistics Based
on Supernet Theory ........................................................................................................................................114
_Di Suo and Fuan Wen_

Analysis on Channel Information and Control Structure Performance in Food
Supply Chain under E-commerce Environment .................................................................................................119
_Qin Li_

The Formative Mechanism of Marketing Capability: The View
of Organizational Learning and Knowledge Management ................................................................................122
_Quanhong Liu and Tao Wang_

Ontology-Based Coordination and Implementation for Garment Supply Chain
Management .............................................................................................................................................................126
_Xin Jin_

Procedure for Traditional Enterprises Developing E-commerce Strategies:
Efficient Guideline for Doing E-commerce .........................................................................................................131
_Baozhong Zhang and Ying Han_

Information Processing Methods

Ant Colony Algorithm Used for Bankruptcy Prediction ..........................................................................................137
_Shuihua Wang, Lenan Wu, Yudong Zhang, and Zhengyu Zhou_

Application and Research of Data Mining Based on Improved PCA Method ..............................................................140
_Wen-Yu Wang and Chuan-Xing Qu_

Convergence Analysis and Parameter Select on PSO .................................................................................................144
_Zhang Qingqing, He Xingshi, and Sun Na_

The Fuzzy Comprehensive Evaluation on Credit Risk of Power Customers
Based on AHP ..........................................................................................................................................................148
_Lu Jianchang and Wu Jipeng_

Estimating Upper Bound of Duration for Instances of Generalized
Well-Formed Workflow ..........................................................................................................................................152
_Zuoxian Nie_

Interval Estimation of Data Series with Poor Information Using Fuzzy Norm
Method ........................................................................................................................................................................158
_Xintao Xia and Qing Zhou_

On the Complexity of Shor’s Algorithm for Factorization ......................................................................................164
_Zhengjun Cao and Lihua Liu_
Information Security

A New Steganography Algorithm Based on Spatial Domain ...............................................................171
Wang Yan and Ling-di Ping

Mobile Conference Scheme Based on Verifiable Random Number ......................................................177
Yining Liu, Jianyu Cao, and Min Zeng

An Improved Anonymous Remote Authentication Protocol ...............................................................181
Yining Liu and Jianyu Cao

Propagation Model for Botnet Based on Conficker Monitoring .........................................................185
Runheng Li, Liang Gan, and Yan Jia

An Efficient Feature Redundancy Removal Approach towards Intrusion Detection in Ad Hoc Network .................................................................................................................................191
Huilin Yin, Pingping Xu, and Tingting Zhu

Design and Implementation of an Initiative and Passive Network Intrusion Detection System ................196
Tian Li and Xueming Zhai

An Adaptive Method to Identify the Web Sensitive Information .......................................................199
Feng Yao Zeng, Hui Gao, and Yan Fu

Towards a Theory of Cyber Security Assessment in the Universal Composable Framework ..................203
Huafei Zhu

The Application Research of Information Hiding Technology in Network Security .................................208
Jing Zhang and Xin-Guang Li

Study on Action and Attribute-Based Access Control Model for Web Services ...................................213
Jian Shu, Lianghong Shi, Bing Xia, and Linlan Liu

A Design of Secure Access Gateway Moving the Control Terminal Down to the Layer 2 Switches ........217
Wei Zhong and Xu Lili

Multimedia Technology

Design and Research on Free Lossless Audio Decoding Systems under the Embedded Development Platform of ARM9 .................................................................223
Zhu Fang, Cai Weiming, and Zhou Yukun

Low Complexity Mode Decision for H.264 Based on Macroblock Motion Classification .................................................................227
Wei Geng and Wu Lenan

An Amended Rate Model on the Intra-rate and Quantization Parameter for Video Coding under the Complexity Constrains .................................................................231
Wei Geng and Wu Lenan
On the Digital Development of Mountain-Based World Cultural Heritage Sites in China ................................................................. 235
   Xiaoyan Zhang and Xianglin Fang

An Ontology-Based General Multi-scale Conceptual Model and its 3D GIS Application ......................................................... 239
   Yaoming Yang, Zhe Gan, Hong Chen, and Xiaoan Tang

Communications Systems

A Common Information Infrastructure for Multi Command Center System ................................................................. 249
   Xiao Zhang, Zhan-huai Li, and Jian-quan Chen

Online Network Resource Allocation Mechanism with the Continuous High Satisfaction ................................................................. 254
   Bei Jin, Jinkui Xie, Tingting Wang, and Zongyuan Yang

A Methodology for the Exploration of Web Browsers ........................................................................................................... 259
   Xin Haitao

The Research on Feature Reduction of Multi-source Heterogeneous Sensor Network ................................................................. 263
   Jiang Yanji, Jiang Ze, and Huang Fenggang

A High Performance Transport Protocol for JTangMQ ........................................................................................................... 268
   Yong Su, Jianwei Yin, Yue Chen, and Zhilin Feng

Classified Real Time Scheduling Mechanism in WDM Network ........................................................................................... 273
   Zhou Li and Xiong Huagang

Study on the Information Service System for Rural Off-Farm Employee Based on Wireless Network ................................................................. 278
   Guoqiang Ren and Yuhui Luo

Optimal Assignment of Delivery Capacity for Network with Constraint ........................................................................ 283
   Ming Luo

Design and Realization of Embedded Ethernet Communication System Based on ARM ................................................................. 287
   Mei Wang, Ruimei Zhao, and Huiting Duan

Theoretic Thought on the Constraints of Information Quality under Network Information-Sharing Environment ........................................................................ 290
   Song Lirong

The VoIP Model Research Based on Finite Birth-Death Processes in Multi-channel Wireless Mesh Networks ........................................................................ 294
   Bin Shen, Rui Wang, Huiqing Luo, Shouhong Yang, and Fei Peng
# Artificial Intelligence

Failure Importance Analysis and Adjustment Based on Bayesian Networks .................................................. 303
   Shubin Si, Wei Hu, and Zhiqiang Cai

A HRD Evaluation Method Based on BP Neural Network .................................................................................. 309
   Dezhen Feng and Ying Gao

The Research of System Survivability Architecture Based on Immunity Principle ............................................. 313
   Jiang Yanji and Huang Fenggang

Research on Drought Forecast Based on Rough Set Theory ........................................................................... 318
   Zhao Liu and Chang-lu Qiao

An Automatic Dead Chicken Detection Algorithm Based on SVM in Modern Chicken Farm ......................... 323
   Weixing Zhu, Yansong Peng, and Bin Ji

Analysis on the Competitive Intelligence in Business Management ................................................................. 327
   Linghua Ding

Reducing FPs in Nodule Detection Using Neural Networks Ensemble .............................................................. 331
   Zhenghao Shi, Kenji Suzuki, and Lifeng He

GAKC: A New GA-Based k Clustering Algorithm ............................................................................................. 334
   Li Xiaohong and Luo Min

Fast Ball Detection Method for Ping-Pong Playing Robots ............................................................................. 339
   Jing Sun, Jiandong Tian, Yingkui Du, and Yandong Tang

On Methods of Transfer as a Learning Based on Artificial Neural Networks .................................................. 344
   Lan Wang

Least Square Support Vector Machines in Combination with Principal Component Analysis for Electronic Nose Data Classification ........................................................................................................... 348
   Xiaodong Wang, Jianli Chang, Ke Wang, and Meiyi Ye

# Applied Cryptography

Constructions of Quantum Blind Signature Based on Two-Particle-Entangled System ........................................ 355
   Lixin Lin and Ying Guo

Verifiably Randomized Quick-Sort Protocols in the Presence of Malicious Adversaries ................................... 359
   Huafei Zhu

Trusted Evolutionary Algorithm for Global Optimization .................................................................................... 363
   Xuefeng Wang

Using LDA and Ant Colony Algorithm for Spam Mail Filtering ....................................................................... 368
   Hui Yin, Fengjuan Cheng, and Dexian Zhang

Improvement of One Password-Based Authenticated Key Exchange Protocol .............................................. 372
   Lihua Liu and Zhengjun Cao
A Secure Mobile Agent Protocol for M-commerce Using Self-Certified Proxy Signcryption .............................................................................................................................................................376

Chao Wang, Yunpeng Han, and Fagen Li

Image Processing

Applying Image Warping Technique to Implement Real-Time Virtual Try-On Based on Person’s 2D Image .................................................................................................................................................................383

Xianhui Zeng, Yongsheng Ding, and Shihuang Shao

Face Orientation Estimation by Particle Swarm Optimization .................................................................................................................................................................................................388

Yudong Zhang, Lenan Wu, Zhengchao Dong, Shuihua Wang, and Zhengyu Zhou

On-Machine 3D Reconstruction Using Monocular Stereo Vision System .........................................................................................................................................................................................................392

Zhongren Wang, Fan Zhang, and Yanming Quan

Digital Measuring Method Based on Computer Vision .........................................................................................................................................................................................................396

Ping Zhao, Yong-kui Li, and Jing-yang Li

Individual Encryption and Watermarking for Protecting Video on the Networks ................................................................................................................................................................................................400

Xiaofeng Li, Xuedong Li, Wei Cui, and Yonghui Liu

A Method of an Efficient Embedding Algorithm of Digital Image Based on Difference Expansion ........................................................................................................................................................................403

Zhigang Li and Chuang Gao

Face Detection Based on AdaBoost and Skin Color .....................................................................................................................................................................................................407

Yan Hou and Qingsong Peng

A Detection Algorithm for Yellow Traffic Signs in Natural Scenes ..................................................................................................................................................................................................411

Guangyu Yu, Guangmin Sun, Weiwei Zou, Zhiyue Wu, and Jing Wang

Line Detection in Image Based on Edge Enhancement ..................................................................................................................................................................................................415

Bin Chen and Hua Zhong

Review and Comparison: Building Extraction Methods Using High-Resolution Images ................................................................................................................................................................................................419

Tiantian Feng and Junqiao Zhao

Automatic Extraction of the Anterior Chamber Contour in OCT images ..................................................................................................................................................................................................423

Lifan Lin and Ying Ju

Pattern Recognition

Pattern Recognition and Analysis of the Blocked Traffic Queuing in Traffic Coordinated Control ..................................................................................................................................................................................................429

Bohang Liu, Qingbing Li, Xiaoping Zhou, and Shaofang Wen

Low Cost Hand Gesture Learning and Recognition System Based on Hidden Markov Model ..................................................................................................................................................................................................433

Jinjun Rao, Tongyue Gao, Zhenbang Gong, and Zhen Jiang

A Study of Fuzzy Emotion Semantic Ontology ..................................................................................................................................................................................................439

Juan-juan Zhao, Jun-jie Chen, and Hui-hui Guo
A Hierarchical System Design for Language Identification ............................................................443

Haipeng Wang, Xiang Xiao, Xiang Zhang, Jianping Zhang, and Yonghong Yan

Combining MAP and MLLR Approaches for SVM Based Speaker Recognition with a Multi-class MLLR Technique .................................................................447

Haipeng Wang, Xiang Zhang, Xiang Xiao, Jianping Zhang, and Yonghong Yan

Harmonic Structure Features for Robust Speaker Recognition against Channel Effect .................................................................451

Chuan Cao, Xiang Xiao, Ming Li, Jian Liu, and Yonghong Yan

A Novel Object Tracking Algorithm Based on Point Pattern Matching ........................................455

Fan Mo, Haodong Pei, Shuying Li, Dan Li, Baorong Xie, and Wei Zhou

Software Engineering

A Software Quality Comprehensive Assessment Algorithm with the Fuzzy Reference Pattern .................................463

Yu Song and Jing Yan

A Decoupling Approach to Business Component Identification ..........................................................467

Xinwei Yuan and Zheng Qin

Software Usability Improvement: Modeling, Training and Relativity Analysis ........................................472

Xiangwei Lai, Yanhui Zhou, and Weiqun Zhang

System Simulation

Simulation of Precoding Algorithms Based on Channel Decomposition ...........................................479

Meng Zhang and Zhen Gong

Computer Simulation and Parameters Estimation for Slope Based on Finite Element Method and Difference Evolution Arithmetic ..........................................................483

Jiang Annan and Su Guoshao

A Novel Algorithm for DOA Estimation ...............................................................................................488

Liu Fugang and Diao Ming

Modifying Simulation Model under Mixed Traffic Condition ..............................................................493

Bohang Liu, Xikui Lv, Qingbing Li, and Jinglong Wu

Flight Simulation Testbed of Unmanned Helicopter ..........................................................................497

Jiande Wu, Ting Feng, and Yugang Fan

Tiling for Performance Tuning on Different Models of GPUs ..........................................................500

Chang Xu, Steven R. Kirk, and Samantha Jenkins

Study on the Traffic Impact Analysis of the Second Ring Road in Beijing .......................................505

Ge Zhiyuan and Zhao Fucheng

The Vehicle Routing Problem Based on the Immune Algorithm ........................................................509

Jiangang Xu and Jianhua Fan

A Topology Partition Algorithm Based on Link Coarsening in Parallel Network Simulation .......................514

Xianqing Yang, Hui He, Hongli Zhang, Kexin Zheng, and Xing Wang
Simulation Research of Nonbinary LDPC Code Based on Finite Fields ...............................................................519
  Yuxiang Li, Guolong Liang, and Guangpu Zhang
Self-Organized Algorithm Simulation for Wireless Sensor Networks ............................................................523
  Yun Bai, Song-bo Ji, and Li Xin
Design and Realization of Task-Oriented Service Platform for Battlefield Environment Information ........................................................527
  Zhe Gan, Yaoming Yang, Xiaoan Tang, and Haiyan Yang
The Development of Verisimilar Information Security Training Platform Based on Virtual Host ..............................................................533
  Wei Zhong and Liu Dong
A Rapid Decision-Making Model in Supply Chain Finance Emergency Based on GDSS ........................................................539
  Duan Weichang

Other Papers
An Improved RBF Network On-Line Learning Algorithm ..................................................................................547
  Zhang Xiao Ming and Ning Guang Liang
Analysis of Mode Mixing Phenomenon in the Empirical Mode Decomposition Method ..........................................................553
  Yanli Yang, Jiahao Deng, and Caipeng Wu
Research on an Environment-Friendly Automated Equipment Applied to Hot-Phosphating for Drill Collar Coupling Screw Thread ..................................................................................557
  Zhang Limin, Duan Zhengyong, and Peng Yong
Research on Anti-Fading Performance of EBPSK System ...............................................................................561
  Feng Man and Wu Lenan
Double Close Loop Electrode Regulator System Based on Active Disturbance Rejection Control Technology ..........................................................................................565
  Wang Yuhua, Lu Xiuhe, and Wang Shirong
The Iterative Calculation of Full Capacity of Roundabouts ..............................................................................570
  Rui-Jun Guo, Bo-Liang Lin, and Wan-Xiang Wang
A Segment-Based Dense Stereo Matching Algorithm ......................................................................................574
  Lixin Zhang, Dong Yang, and Zhengguang Xu
The Weak Signal Detection Based on Chaos and Genetic Algorithms ..............................................................579

Message from the ISISE 2009 General Chairs

The 2009 International Symposium on Information Science and Engineering (ISISE 2009), held 26–28 December 2009, was the second in the annual series that started in Shanghai, China.

In today’s globally competitive environment, advanced effective intelligent information technologies have provided users with new opportunities to be intensely connected. These new technologies interweave tightly into our private and public communications, interactions, and transactions, and inadvertently form an intricate infrastructure for critical social and institutional functions such as commerce, banking and finance, utilities, national defense, education, entertainment, and many more useful applications.

Welcome to ISISE 2009. Welcome to Shanghai, China. The 2009 International Symposium on Information Science and Engineering is co-sponsored by Shanghai Institute of Electronics, China; Shanghai Jiaotong University, China; Fudan University, China; Peoples’ Friendship University of Russia, Russia; National Chung Hsing University, Taiwan; Jiaxing University, China; Nanchang Hangkong University, China; and Guangdong University of Business Studies, China. Much work went into preparing a high-quality program.

The goal of ISISE 2009 was to bring together researchers and practitioners from academia, industry, and government to exchange their research ideas and results, and to discuss the state of the art in the many areas of security for electronic commerce. Symposium participants heard from renowned keynote speakers including IEEE Fellow Prof. Jun Wang from Chinese University of Hong Kong, Hong Kong; IEEE and IET Fellow Prof. Chin-Chen Chang from National Chung Hsing University, Taiwan, and chair of the IEEE Shanghai Section; and Prof. Junfa Mao from Shanghai Jiaotong University, China.

We would like to thank the program chairs, organization staff, and members of the program committees for their hard work. We hope that ISISE 2009 was successful and enjoyable to all participants. We also thank Mr. Randall Bilof for his wonderful editorial service to this proceedings.

We hope each of you enjoyed successful deliberations, stimulating discussions, new friendships, and all the enjoyment Shanghai, China, offers. While this is a truly remarkable symposium, there is more yet to come. We look forward to seeing all of you next year at ISISE 2010.

Wen Chen, Martha Russell, Jian Shu
ISISE 2009 General Chairs
